

Sophia University Academic Research Special Promotion Project

Comparative and International Education Research on Education for Sustainable Development in Asia

Values, Challenges and Prospects of Education for Sustainable Futures

The role of Education for Sustainable Development (ESD) is attracting attention as a means of achieving the SDGs to solve global issues. Along with UNESCO's International Conference on ESD (2021), all schools in Japan, including UNESCO Associated Schools Project Network, are emphasizing education to nurture "creators for sustainable futures". In response to this, Sophia University has started an international joint research project on ESD (Sophia-ESD Project). In this symposium, we will discuss the significance and role of ESD as a kick-off of the project.

For more details
